

**FOR OPTICAL DAA, HIGH LINEAR
16-PIN SOP PHOTOCOUPLER**

-NEPOC™ Series-

DESCRIPTION

The PS8741 is an optically coupled isolator containing a GaAs LED on the light emitting side (input side) and two photodiodes on the output side.

It is suitable for analog control applications such as PCMCIA card, modem, voice telephony and fax machines.

FEATURES

- For PCMCIA
- Small and thin package (16-pin SOP: 255 mil, Pin pitch = 1.27 mm, Height = 2.1 mm)
- High transfer gain linearity ($\Delta K_3 = 1 \% \text{ MAX.}$)
- High isolation voltage (BV = 1 500 Vr.m.s.)
- Ordering number of taping product: PS8741-F3, F4

APPLICATIONS

- PCMCIA card
- Notebook PC, PDA
- Modem
- Telephone, FAX

ABSOLUTE MAXIMUM RATINGS (T_A = 25 °C, unless otherwise specified)

Parameter		Symbol	Ratings	Unit
Diode	Forward Current (DC)	I _F	50	mA
	Reverse Voltage	V _R	3	V
	Power Dissipation	P _D	80	mW/ch
	Peak Forward Current ^{*1}	I _{FP}	0.5	A
Detector	Reverse Voltage	V _R	20	V
	Power Dissipation	P _C	50	mW/ch
Isolation Voltage ^{*2}		BV	1 500	Vr.m.s.
Total Power Dissipation		P _T	180	mW
Operating Ambient Temperature		T _A	-40 to +85	°C
Storage Temperature		T _{stg}	-40 to +100	°C

*1 PW = 100 μs, Duty Cycle = 1 %

*2 AC voltage for 1 minute at T_A = 25 °C, RH = 60 % between input and output

ELECTRICAL CHARACTERISTICS (T_A = 25 °C)

Parameter		Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Diode	Forward Voltage	V _F	I _F = 5 mA		1.1	1.4	V
	Reverse Current	I _R	V _R = 3 V			10	μA
	Terminal Capacitance	C _t	V = 0 V, f = 1 MHz		30		pF
Detector	Dark Current	I _D	V _{CC} = 5 V, I _F = 0 mA		1	25	nA
Coupled	Servo Gain (I _{PD1} /I _F)	K ₁	V _{CC} = 5 V, I _F = 2 mA	0.3	1.0	1.8	%
	Forward Gain (I _{PD2} /I _F)	K ₂		0.3	1.0	1.8	
	Transfer Gain (K ₂ /K ₁)	K ₃	V _{CC} = 5 V, I _F = 2 mA	0.75	1.0	1.25	
	Transfer Gain Linearity	ΔK ₃	V _{CC} = 5 V, I _F = 2 to 10 mA		0.3	1	%
	K ₃ Temperature Coefficient	ΔK ₃ /ΔT	V _{CC} = 5 V, I _F = 2 to 10 mA		0.005		%/°C

APPLICATION EXAMPLES

USAGE CAUTIONS

1. Since this product is sensitive to electro-static discharge, take anti-ESD measures, such as using a wrist strap, while handling it.
2. Recommended Soldering Conditions
 - (1) Handling (Soldering iron)
 - Temperature 260 °C or below
 - Time 5 seconds or less
 - Leave more than 1.0 mm from the lead roof
 - Flux Rosin flux containing small amount of chlorine (The flux with a maximum chlorine content of 0.2 Wt % is recommended.)
 - (2) Infrared reflow soldering
 - Peak reflow temperature 235 °C (Package surface temperature)
 - Time of temperature higher than 210 °C 30 seconds or less
 - Preheating conditions 120 to 160 °C (Package surface temperature),
60 to 90 seconds
 - Number of reflows One
 - Flux Rosin flux containing small amount of chlorine (The flux with a maximum chlorine content of 0.2 Wt % is recommended.)
3. Fluxes

Avoid removing the residual flux with freon-based and chlorine-based cleaning solvent.

[MEMO]

[MEMO]

CAUTION

Within this device there exists GaAs (Gallium Arsenide) material which is a harmful substance if ingested. Please do not under any circumstances break the hermetic seal.

 - No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.
 - NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.
 - Descriptions of circuits, software, and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software, and information in the design of the customer's equipment shall be done under the full responsibility of the customer. NEC Corporation assumes no responsibility for any losses incurred by the customer or third parties arising from the use of these circuits, software, and information.
 - While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.
 - NEC devices are classified into the following three quality grades:
 - "Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.
 - Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots
 - Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)
 - Specific: Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.
- The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.
